For my final project, I will make a small three-page website where users can decorate a cute Christmas tree. The theme of my website is soft, warm, and fun. I want the website to feel like a happy Christmas activity. I will use simple colors and shapes to make the whole design look cute.

Home page: The website begins by showing a big Christmas tree on the home page. At the top, a short title animation appears with the words "Decorate Your Cute Christmas Tree!" Below the title, there is a button that takes users directly to the Decorate page, where they can start choosing and adding ornaments to their own Christmas tree.（Maybe I'll share some Christmas stories?）

Decorate page：Users can click or drag ornaments (stars, candy canes, lights, snowmen) onto the tree. When the user presses "Light Up!", the tree will show CSS animation (the lights change color). I will add p5.js snow to add a small snowfall in the background.

About page：I explain my design ideas，show my color palette and fonts，and include image references

Design：I will use classic Christmas colors like red, green, gold, and white to match the holiday theme. I will also use round and friendly fonts to create a soft and cute feeling. White snow and simple Christmas elements.
